

Expand your fishing experience

Featuring Koden Digital Filtering (KDF™) and exclusive Sona-Tone, the new 8.4" digital colour echo sounder from Koden is now available to all serious fishermen in Australia through Coursemaster Autopilot's dealers nationally.

The digital filtering eliminates clutter and noise and enhances the images of the fish targets in both shallow and deeper depths, making it easier to differentiate between baitfish, larger fish, and the bottom. Turn ON the exclusive Sona-Tone feature to identify the sea floor and what's under your boat with different sounds.

Koden have added an anti-reflective coating on the LCD display (8, 16, or 64 colour levels), for excellent readability in direct sunlight.

The auto function on the CVS-128 is the most useful setting on this digital echo sounder, especially for functions such as Gain, Range, and Shift. Up to 10 screen images can be stored in the built-in memory, and with input from external GPS sensor, it can of course, lead you back to your favourite fishing hot spot or other saved positions. Available in either 600W or 1kW output power for your preferred fishing depth.

For further information contact Coursemaster Autopilots, Australian distributor of Koden Marine Electronics 02 9417 7097 sales@coursemaster.com or www.coursemaster.com
